

BrightPath Tech — OMS Implementation Proposal

Submitted to: Procurement Committee | **Date:** July 5, 2026

1. Executive Summary

This proposal responds to the RFP issued by a mid-size retail group seeking a cloud-based Order Management System (OMS) to consolidate order processing across e-commerce, in-store point-of-sale, and wholesale channels. The system must integrate with the client's existing SAP ERP and warehouse management system, provide real-time inventory visibility across channels, and support approximately 3x order-volume growth over the next 24 months without a re-platform. BrightPath Tech offers a fast, cost-effective path to a working OMS using our pre-built order orchestration platform, which we configure and extend rather than building from scratch. We believe most retailers overpay for custom OMS builds when 80% of the functionality is standard.

2. Proposed Solution & Implementation Approach

Our platform is a configurable SaaS order engine already used for e-commerce order management. We will configure it for the client's three channels and connect it to SAP using our standard connector.

- Pre-built order engine, configured (not custom-built) for the client's workflows
- Standard SAP connector (REST-based); custom fields mapped during setup
- Single-region cloud hosting with daily backups
- Inventory sync every 15 minutes across channels (near-real-time)

We have not previously connected our SAP connector to a client using SAP's IDoc interface specifically; our reference implementations used SAP's newer OData layer only. We are confident this can be adapted during the integration phase.

3. Timeline, Team Structure & Milestones

BrightPath's configuration-first approach lets us go live in 10 weeks.

- Weeks 1-2: Requirements workshop and platform configuration begins
- Weeks 3-6: SAP connector setup and channel configuration in parallel
- Weeks 7-8: User acceptance testing (client-led)
- Weeks 9-10: Go-live, all three channels simultaneously

Team: 1 Implementation Consultant (also serves as project manager) and 2 configuration engineers, supplemented by an offshore support pool as needed. The team is not fully dedicated and may be shared across other active client implementations.

4. Pricing

Line Item	Detail	Price (USD)
Platform Setup & Configuration	One-time, 10-week engagement	\$89,000
SAP Connector	Standard connector, custom field mapping	\$22,000
Annual Subscription	Platform license, Year 1 (up to 500K orders/yr)	\$54,000 / yr
Overage Fee	Per 10,000 orders above annual tier	\$400
Support	Email + ticket support, next-business-day response	Included

Assumptions: Pricing assumes standard configuration with no custom code. Total Year 1 cost: approximately \$165,000 — the lowest-cost option under evaluation. Note: the annual order tier (500K) is based on the client's current volume; the RFP's 3x-growth target may require an upgraded tier at renewal, priced separately at that time.

5. Security, Compliance & Risk Controls

Our platform runs on a major cloud provider's infrastructure, which carries its own compliance certifications. Customer data is encrypted in transit. We follow standard industry practices for access control.

- Hosted on a major public cloud provider (specific compliance certifications available on request)
- TLS encryption in transit for all API traffic
- Standard username/password authentication for the admin console, with optional SSO add-on

We do not currently hold a SOC 2 report; one is in progress and expected within the next 12 months. We have not conducted a third-party penetration test in the last 24 months. Data retention and audit-log policies are configurable but not detailed here; specifics can be discussed during contracting.

6. Support Model, Experience & References

BrightPath Tech was founded in 2023 and has completed 4 OMS configuration projects to date, primarily for smaller e-commerce-only retailers. This would be our first engagement involving both a wholesale channel and an existing SAP ERP.

- Reference 1: Direct-to-consumer apparel brand (~\$15M revenue) — e-commerce-only OMS, live since 2024
- Reference 2: Available on request
- Support: business-hours ticket support included; phone support available as a paid add-on
