

NexaWorks — Order Management System Implementation Proposal

Submitted to: Procurement Committee | **Date:** July 12, 2026

1. Executive Summary

This proposal responds to the RFP issued by a mid-size retail group seeking a cloud-based Order Management System (OMS) to consolidate order processing across e-commerce, in-store point-of-sale, and wholesale channels. The system must integrate with the client's existing SAP ERP and warehouse management system, provide real-time inventory visibility across channels, and support approximately 3x order-volume growth over the next 24 months without a re-platform. NexaWorks proposes a hybrid approach: a proven order-management core, customized where the client's workflows genuinely differ from standard retail patterns, delivered through a structured, milestone-driven plan with clearly named owners at every stage. Our emphasis is on predictable delivery and a support model the client's team can actually run day-to-day.

2. Proposed Solution & Implementation Approach

Our OMS core handles order capture, inventory allocation, and fulfillment routing out of the box; we customize the returns workflow and wholesale order approval chain, which our discovery calls identified as the client's two non-standard requirements. SAP integration uses IDoc for master data and OData for real-time transactional sync, matching the client's existing SAP interface layer.

- Configurable core + two custom modules (returns workflow, wholesale approvals)
- SAP IDoc (master data) + OData (transactional) integration, matching existing SAP setup
- Real-time inventory sync (sub-60-second latency) across all three channels
- Staged rollout with a documented rollback plan at each milestone

3. Timeline, Team Structure & Milestones

We propose a 5-month implementation with named milestone owners and a weekly steering checkpoint, so schedule risk is visible early rather than discovered at go-live.

- Weeks 1-2: Discovery + SAP interface confirmation (Owner: SAP Integration Lead)
- Weeks 3-8: Core build + custom returns/wholesale modules (Owner: Delivery Lead)
- Weeks 9-12: Channel-by-channel integration testing (Owner: QA Lead)
- Weeks 13-16: Parallel-run with existing systems, discrepancy tracking (Owner: Delivery Lead)
- Weeks 17-20: Phased cutover by channel + 4-week hypercare (Owner: Support Lead)

Team: 1 Engagement Lead, 1 Delivery Lead, 1 dedicated SAP Integration Specialist, 3 engineers, 1 QA Lead, and 1 Support Lead who begins shadowing the project from Week 9 to ensure continuity into steady-state support — a transition step many implementations skip, which we've found is the biggest driver of post-go-live escalations.

4. Pricing

Line Item	Detail	Price (USD)
Implementation (fixed bid)	Discovery through go-live, 5 months	\$276,000
Custom Modules	Returns workflow + wholesale approval chain	\$64,000
Annual Platform License	Per-tenant SaaS license, Year 1	\$78,000 / yr
Hypercare Support	4 weeks post-go-live	Included
Ongoing Support (Yr 2+)	Business-hours SLA, 2-hour response, named CSM	\$6,500 / mo

Assumptions: Pricing assumes discovery confirms scope of the two custom modules within +/-15%; a change-order process applies beyond that. Total Year 1 cost including license: approximately \$418,000.

5. Security, Compliance & Risk Controls

- SOC 2 Type II certified hosting; report available under NDA
- AES-256 encryption at rest, TLS 1.2+ in transit
- Role-based access control with quarterly access reviews
- Annual third-party penetration test; most recent report dated January 2026
- Documented change-management and rollback procedure for every release

Key risk: Custom module scope creep. Mitigated by locking returns/wholesale requirements at the end of discovery (Week 2) before any code is written.

6. Support Model, Experience & References

NexaWorks has completed 8 OMS implementations in the past four years, 5 with SAP integration. Our differentiator is the transition process: the named Support Lead who will own the account post-go-live is staffed onto the project from Week 9, not handed the account cold at cutover.

- Reference 1: Multi-brand footwear retailer — OMS with wholesale + e-commerce, SAP-integrated, live since 2023
- Reference 2: Mid-size grocery/retail hybrid — OMS with returns workflow customization, live since 2024
- Reference 3: Home furnishings retailer — available on request
- Support: named Customer Success Manager, 2-hour business-hours response SLA, monthly service review included in Year 2+ pricing
